

SECTION 9

9.06 INSTALLATION:

Denver Water may permit the Applicant to have his/her own Contractor install a 16 inch or 20 inch Transmission Main. The Contractor must be pre-qualified by Denver Water for the installation of 16 inch and 20 inch pipe inside Denver and in Total Service Areas. As with 4 inch through 12 inch mains inside the City and County of Denver and Total Service Areas, Denver Water reserves the right to install 16 inch and 20 inch Transmission Mains when to do so is in the best interest of Denver Water. This determination is solely at the discretion of Denver Water and the Applicant shall pay all costs for extending mains whether installed by his/her Contractor or by Denver Water.

Sixteen inch and 20 inch mains present a greater danger when improperly designed or installed and the nature of their supply is more important than that of smaller mains. Denver Water will, therefore, review the design and installation of these mains more closely to insure that sound engineering and construction procedures are followed, within the context of 2.08.
